OVERVIEW

I'm a fourth-year Computer Science student at the College of Computer Science and Technology, Xi'an Jiaotong University, expected to earn my B.E in fall 2027. My research interests primarily focus on the training, evaluation and application of Large Language Model Agents.

PROJECTS

AARR Series
(https://aarr-bench.com) **May. 2026**
Evaluating how well LLM agents close the gap with human researchers across the full research lifecycle. Not just executing code — testing the cognitive gaps that still separate frontier agents from human researchers.

Archimedes
(https://github.com/Johanson-colab/Archimedes) **Oct. 2026 - Now**
A local-first research-agent suite for discovering evidence, reading papers, inspecting code, running research work, and writing with traceability.

Auto-Cursor
(https://github.com/JiayuuWang/Auto-Cursor) **Oct. 2025 - Nov. 2025**
The first *(to the best of my knowledge) GUI-native orchestration layer that pilots the Cursor IDE like a human operator. By combining large language models, visual grounding, and deterministic automation, the project explores how agents can build software without being confined to command-line tooling.*

EarthAgent
(https://jiayuuwang.github.io) **May. 2025 - Oct. 2025**
A general AI agent for the remote sensing field, dedicated to making complex and high-threshold geospatial analysis more accessible and automated.
- Attracted **300+** likes on RedNote, demonstrating strong community engagement and interest.

Earth-Insights WeChat Official Account Agent
(https://jiayuuwang.github.io) **Sept. 2025 - Now**
An automated system that fetches and analyzes the latest papers in remote sensing and deep learning fields. It utilizes document analysis agents and various analysis tools to achieve fully automated paper analysis and summarization.
- Publish **100+** blogs covering **600+** papers, accumulating over **8,000** reads and attracting more than **800** followers.
